Surface Preparation	The service and life span and the service performance of paints are directly related to the degree of surface preparation. To prevent condensation of moisture onto substrate prior to coating application, relative humidity should not exceed 85% and substrate temperature should be more than 3°C above Dew Point. The surface to be overcoated must be dry and free from surface contaminants. Remove all oil, wax and grease by solvent cleaning. Remove all dirt and dust by dry brushing.							
Coating Specifications	1 st Coat APM PU 600 2K Plastic Paint
